Education

University of Georgia, Athens, GA

Aug 2024 - May 2026

MS in Computer Science

CGPA: 3.95

National Institute of Technology, Raipur, India

Dec 2020 - Jun 2024

Bachelor of Technology in Information Technology

CGPA: 8.21

Experience

The University of Georgia

Jan 2026 - May 2026

Software Engineer

Athens, GA

- Designed environmental monitoring systems with **ESP32** microcontrollers and precision sensors (**BME680**, **F662**), programmed data acquisition in **Python**, and transmitted measurements via **RESTful APIs** to **GCP** for agricultural research.
- Architected an end-to-end **IoT** platform using **Redis** and **InfluxDB**, reducing data retrieval latency by 40% for high-concurrency research workloads.
- Developed scalable applications for real-time visualization and containerized the full stack with **Docker**, streamlining automated deployments across distributed cloud environments.
- Deployed secure remote-access tunnels via **Cloudflare** to manage data transmission across complex network topologies, ensuring reliable continuous data flow for research teams.

The University of Georgia

Aug 2025 - Dec 2025

Embedded Systems Engineer

Athens, GA

- Reduced device form factor by 66% through optimized hardware selection and custom **3D-modeled/3D-printed** enclosures.
- Validated the system across livestock logistics, growth chambers, and greenhouse monitoring, improving precision and reliability in diverse field environments.
- Managed the full product lifecycle from sensor research and hardware assembly to performance verification, stakeholder coordination, and test result logging in **SQL** databases.

Projects

BuzzCart (Like2Buy) | Flutter, Dart, Go, PostgreSQL, MongoDB, MinIO, Docker

Live Link

- Built a production-grade social commerce platform using **Flutter** and **Go/Gin**, with reels, shopping, messaging, follow system, and 20+ **REST APIs** for real-time sync.
- Designed containerized microservices with **Docker & Kubernetes**, using **PostgreSQL**, **MongoDB**, and **MinIO** for scalable data and object storage.
- Developed a **RAG**-powered chatbot using **FastAPI**, **ChromaDB**, and **OpenAI**, supporting **PDF/TXT/DOCX** ingestion and chat history persistence.
- Implemented secure **JWT**-based authentication, **RBAC**, and optimized **Flutter** state management with secure storage, dark mode, and efficient app models.

RideShare App | Java, Android Studio, Firebase, Google Maps API

Jan 2025

- @Yash8576/RideShareApp
- Engineered ride-sharing Android application using **Java** with real-time location tracking, automated ride matching, secure payment integration, and driver-passenger communication for concurrent sessions.
- Managed version control using **Git** workflows with branching and pull requests; resolved 20+ merge conflicts across 50+ commits through code reviews, pair programming, and team collaboration.
- Established **Firebase Authentication** for secure user management and **Firestore** for distributed data storage; leveraged **Google Maps API** achieving 95% location accuracy and optimized routing.

Technical Skills

Relevant Coursework: Machine Learning, Deep Learning, Artificial Intelligence, Cloud Computing, Algorithms, Operating Systems, Database Management System, Computer Networks, Cryptography and Network Security.

Programming & Scripting: Python, Java, Shell/Bash, SQL, C++

AI/ML Frameworks & Technologies: TensorFlow, PyTorch, LLMs, Agentic Workflows, RAG, Vector Databases, Deep Learning, Model Training & Evaluation, LangChain

Cloud Platforms & DevOps: AWS, Azure, GCP, Docker, Kubernetes, CI/CD, Git, Infrastructure as Code, DevSecOps Practices.

Software & API Integration: RESTful APIs, Model Deployment, Orchestration, Function-calling, Tool Integration, Distributed Data Storage.

Enterprise & Systems: Linux (Ubuntu), ServiceNow, CMDB, Change Management, System Configuration, Technical Documentation, Stakeholder Communication.
